

BIODIVERSITY , PROTECTION AND EXPLOITATION OF WATER RESERVOIS

PHYSICO-CHEMICAL PROPERTIES OF TESTED WATERS

The water in the mountains is the cleanest .
Water Wz,Bo,Krp and Odra is the less clean
than Op, Ms,Plasa.
Sulph , High on Krp and Odra becouse
agriculture

PHYSICO-CHEMICAL PROPERTIES OF TESTED WATERS

- Plasa , Wz, Bo is the floating water and have a low temperature; otherwise than odra, Krp, Ms, Op are more warmer because the water is standing or in the city.

Microbiological biodiversity of waters.

- At this week, we got familiar with chemistry. We researched coli bacteria in water. We learned a lot of interesting stuff about ways to recognize bacteria from the water.

Fish breeding and nature protection- Polish solutions.

- We've seen the hunting gear . We saw what the fish are fed on. We know how important fish are in the environment .

Use of water for commercial purposes – fish breeding.

- Fishes are really important part of our diet. Our group went to Stawy Milickie to learn more about it.
- They showed us how the fishes are fed, raced, mate and how to catch them for different meanings.
- We also learned a lot about the birds, what influences the fishes.

Other environmental factors affecting water quality.

- Water quality depends on many things like temperature and oxygen for example.
- Things like agriculture, factories, cars are polluting our waters .

My proposals for actions to improve water quality

- We need to save water we prefer fast shower and making ecologic desissions like how your clothes or food are made
- Do not trash the nature/ you can also clean it
-
